# World Horticultural Trade and U.S. Export Opportunities

## U.S. Horticultural Exports Returned to Upward Trend in FY 2000

\$ Billion

Source: U.S. Bureau of the Census

Total U.S. horticultural product exports in Fiscal Year (FY) 2000 (October 1999-September 2000) have bounced back to reach \$10.5 billion, up 2 percent from shipments in FY 1999. Fresh vegetables, valued at \$1.2 billion, led U.S. horticultural export value gain, with an increase of 11 percent from FY 1999. Shipments of fresh fruits (valued at \$2.0 billion), processed vegetables (valued at \$1.5 billion), and wine (valued at \$550,000) were also strong, with increases of 8 percent, 4 percent, and 1 percent, respectively. U.S. horticultural exports to Canada, the largest U.S. horticultural market, continued their upward trend, with shipments in FY 2000 valued at a record \$3.2 billion, up 5 percent from sales in FY 1999. Shipments to Japan, the second U.S. horticultural largest customer, remained strong at \$1.7 billion. Mexico is now the third largest country market for U.S. horticultural sales, with shipments valued at a record \$871,229 in FY 2000, up more than 30 percent from the value exported last fiscal year and almost three times more the value shipped in FY 1996. Continued supplies of good quality products, strong demand from foreign buyers, and continued market promotion efforts will likely boost U.S. horticultural sales in FY 2001 and beyond.

### Export Summary

U.S. exports of horticultural products to all countries in September totaled \$888 million, an increase of 5 percent from the same month a year earlier. Nine of the 15 product categories registered value increases. Categories with the most significant increases in September were citrus (up \$4.1 million or 36 percent) and tree nuts (up \$26 million or 28 percent). The categories with the most significant decreases were wine (down \$5.2 million or 10 percent) and fruit/vegetable juices (down \$6.3 million or 10 percent). For FY 2000 (October-September), the total value of U.S. horticultural exports was 10.5 billion, up 2 percent from the same period during FY 1999.

---

To access **FAS Attache Reports** online, please reference the following Internet address:

<http://www.fas.usda.gov/scriptsw/attacherep/default.asp>

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries. Search by keyword, including country and commodity.

#### What's New on the Homepage?

The Horticultural & Tropical Products Division has introduced an enhanced feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site will contain information on policy and technical developments affecting trade in horticultural commodities, as well as selected reports submitted by FAS overseas offices and special reports prepared by the division. The information will typically remain on the site for approximately one month, before being archived. For further information on this new feature, please contact Karina Ramos at (202) 720-0897. Go to <http://www.fas.usda.gov/http/>.

---

## Northern Hemisphere Pear Situation and Outlook

Pear production in selected Northern Hemisphere countries in 2000/01 is forecast at 12.2 million metric tons, up 3 percent from the 1999/2000 output. The increase mainly reflects larger crops in China and Italy, the two largest pear producers. In China, pear production in 2000/01 is forecast up 4 percent to a record 8 million tons. Pear output in Italy is expected to have bounced back in 2000/01 to more than 920,000 tons. On the other hand, smaller pear crops in 2000/01 are expected in some other major Northern Hemisphere producing countries, such as the United States, Spain, and France. Northern Hemisphere countries' pear exports in 2000/01 are forecast at about 980,000 tons, 5 percent above the previous season's shipments. Higher exportable supplies are anticipated in some major exporting countries, including China, the Netherlands, and Italy. U.S. pear exports in 2000/01 are forecast to remain strong at about 155,000 tons. Larger supplies of fresh-marketed pears, the diversion of more processing pears into the fresh market, and continued strong demand from important customers, such as Mexico, could likely hold strong U.S. pear exports in 2000/01.

### Production

#### Northern Hemisphere pear production continues its upward trend in 2000/01

Pear production in selected Northern Hemisphere countries in 2000/01 is forecast at 12.2 million metric tons, up 3 percent from the 1999/2000 output. The increased mainly reflects a larger crop in *China*, the world's leading pear producing country, and in *Italy*, the second largest producer. On the other hand, pear production in the *United States*, the third largest producer, is forecast to decrease slightly in 2000/01 to 910,000 tons.

Chinese pear production is forecast to increase to more than 8 million tons in 2000/01. China's pear production has increased steadily during the last years, the result of extensive planting during the 1980's and early 1990's. Most of China's pear crops are grown by many individual growers on small parcels of land. Large scale commercial orchards are rare. Ya pears are the most popular variety grown in China, accounting for about 30 percent of production. Other important varieties include Su, Xuehua, and Pingguo pears.

Italy's pear production, the largest in the *European Union (EU)*, is expected to have bounced back this season from the reduced 1999/2000 crop. As such, pear output in Italy in 2000/01 is forecast at 923,000 tons, up almost 20 percent from 1999/2000, but below the exceptional production level in 1998/99. The region of Emilia-Romagna in Northern Italy continues to account for the bulk of total Italian pear production. Abate and Williams are the two major pear varieties grown in Italy.

U.S. pear production in 2000/01 is forecast to decrease slightly to 910,000 tons. The downturn reflects less production of Barlett pears, the main produced variety, accounting for more than half the U.S. annual pear crop. Production of U.S. Barletts in 2000/01 is forecast at 490,000 tons, down 8 percent from 1999/2000. Normally, about three-quarters of the U.S. Bartlett crop is processed. However, economic difficulties facing some processing industries in northern California will likely divert more Barletts to the fresh domestic and export markets in 2000/01. Washington, California, and Oregon account for more than 95 percent of total U.S. pear production.

## Trade

### Northern Hemisphere pear exports forecast to increase in 2000/01

Northern Hemisphere pear exports in 2000/01 are forecast at about 980,000 tons, up 5 percent from the previous season's shipments. Increased exports are anticipated from *the Netherlands, Italy, and China*. Pear shipments from these countries in 2000/01 will likely benefit from expected larger crops and the related increase in exportable supplies. On the other hand, *U.S.* pear exports in 2000/01 are forecast to hold at the 1999/2000 level.

Dutch pear exports in 2000/01 are forecast at 181,000 tons, up more than 20 percent from shipments in 1999/2000. A larger pear crop, more favorable prices, and continue strong demand from major customers will likely boost Dutch pear shipments in 2000/01. The United Kingdom is by far the most important destination for Dutch pears, followed by Russia, Sweden, France, and Norway. The Netherlands is also a transshipment venue for fruit trade in the EU. Almost all Chilean pears destined for the EU market are traded via the Netherlands.

Italy's pear exports are forecast to increase to 160,000 tons in 2000/01, as a result of a larger crop and the return to more normal exportable supplies. Germany is Italy's major pear market, accounting for about half the volume of total shipments.

Chinese pear exports are forecast to increase to 150,000 tons in 2000/01, mainly the result of a larger crop. Pear shipments from China have increased considerably in recent years. For example, China exported about 140,000 tons of pears in 1999/2000, compared to practically nothing 10 years ago. Fruit quality in China continues to improve, and, as such, expansion of its export markets is expected to continue in 2000/01, especially to neighboring Asian countries and Russia.

U.S. pear shipments in 2000/01 are forecast at 155,000 tons, up 1 percent from the 153,000 tons shipped in 1999/2000. Larger supplies of fresh-marketed pears, the diversion of more processing pears into the fresh market, and continued strong demand from important customers, such as Mexico, would likely contribute to strong U.S. pear exports in 2000/01. Exports have become vital for the success of the U.S. pear industry. Today, the percentage of U.S. pear production going into export has increased dramatically and a larger share of the income of pear farmers originates from export sales. Canada and Mexico together account for more than three-quarters of total U.S. pear shipments.

## **U.S. pear exports in 1999/2000 recorded the second largest volume and value on record**

U.S. pear shipments in 1999/2000 totaled 152,954 tons, valued at \$87 million, the second largest volume and value on record. Larger-than-expected crops in the states of California and Washington, major U.S. exporting states, and the related decrease in prices, boosted U.S. pear shipments in 1999/2000. Exports to Mexico increased 40 percent to 73,191 tons, valued at \$38 million, both a record. Moreover, Mexico became by far the main destination for U.S. pears, buying half the volume of U.S. pear exports in 1999/2000. U.S. sales to Canada, the second most important market, totaled 48,066 tons, valued at \$31 million, up 15 percent and 7 percent, respectively, from 1998/99. Increased U.S. pear shipments in 1999/2000 were also reported in Venezuela, which became the third largest market with more than 5,000 tons, valued at \$3 million. On the downside, sales to Brazil decreased more than 60 percent in 1999/2000 to 4,058 tons, valued at \$2.4 million. The ongoing economic problems facing Brazil combined with a stronger U.S. dollar have hampered U.S. pear shipments to that country in recent years.

The completion of trade agreements and increased promotion activities under the Market Access Program (MAP) have been key elements in the success of U.S. pear exports in recent years. Almost 20 percent of the U.S. total pear crop is now going to export, compared to 5 percent twelve years ago. Moreover, the share of U.S. exports as a percentage of pears produced for fresh use only reached more than 30 percent in 1999/2000. Continued supplies of good quality fruit, strong demand from leading customers, and market promotion efforts should continue to boost U.S. pear sales in foreign markets.

## **Southern Hemisphere**

It is too early to make a reliable forecast for the Southern Hemisphere countries for the 2000/01 season (harvest in 2001). Forecasts will be available in the March 2001 issue of *World Horticultural Trade & U.S. Export Opportunities*.

*(The FAS Attache Report search engine contains reports on the Deciduous Fruit industries for more than 20 countries, including China, Italy, and France. For further information on production and trade, contact Samuel Rosa at 202-720-6086. For information on marketing, contact Sonia Jimenez at 202-720-0898. Also, visit the pear web page at: <http://www.fas.usda.gov/http/horticulture/pear.html>)*

## Raisin Situation and Outlook

**Raisin production is projected up 26 percent in Northern Hemisphere countries for marketing year (MY) 2000/01. Greece, Turkey, and Mexico are estimating production to increase by one third compared to MY 1999/2000. In the United States, raisin production is expected to increase by 19 percent to reach 369,354 tons. As a result of the large projected raisin crops in Northern Hemisphere countries, raisin exports from Northern Hemisphere countries are expected to increase during 2000/01. In the Southern Hemisphere, production is expected to decline slightly in Chile and South Africa while production in Australia is expected to increase 9 percent. Consequently, raisin exports from Southern Hemisphere countries are expected to decline by 2 percent. Overall, raisin production and exports for selected countries are projected up 22 percent and 17 percent, respectively.**

### Southern Hemisphere

#### Australia

The 2000/2001 (March 2001 - February 2002) raisin crop is forecast up 9 percent to 29,000 tons. A return to normal weather conditions is expected to increase yields. Furthermore, more wine grape production is expected to be diverted to dried fruit, further increasing the size of the raisin crop. Raisin production in 1999/2000 was changed from 32,500 tons to 26,667 tons, due to lower than expected yields, as a result of unfavorable weather prior to harvest. Despite the downward revision, raisin production in 1999/2000 is up 26 percent from the small raisin crop in 1998/99.

Exports during 2000/01 are projected to decrease by 7 percent to 8,000 tons, as greater amounts of raisin production are consumed domestically. Given the small size and poor quality of Australia's raisin crop in recent years, exporters anticipate that the availability of high quality raisins for export will continue to be small. Some exporters are indicating that priority will be given to clients in the United Kingdom and Germany. In 1999/2000, exports are estimated to reach 8,610 tons, up 54 percent from the small raisin crop in 1998/99. The major export markets thus far in 1999/2000 are Germany, the United Kingdom, New Zealand and Canada. Raisin imports are expected to decline by 14 percent in 2000/01 to reach 15,000 tons.

## **Chile**

Poor weather in Chile's raisin producing areas will reduce raisin production in Chile to 34,000 tons in 2000/01 (January 2001 - December 2001), an estimated 3-percent decline from the previous year. Raisin production for 1999/2000 has been revised upward from 31,000 tons to 35,000 tons, as lower quality grapes were diverted from fresh consumption to raisin production.

Over 90 percent of Chile's raisin production is exported. Export estimates for 1999/2000 were revised up from the previous forecast to 30,500 tons, because of the larger raisin crop. For 2000/2001, exports will depend on total final production, but are currently expected to be at a level similar to the previous year. The Latin American market represented close to 65 percent of Chile's raisin exports in 1999/2000. Chile does not import raisins.

## **South Africa**

Raisin production is forecast at 37,000 tons in 2000/01 (January 2001 - December 2001), a 3 percent decline from the previous year, as a result of poor weather conditions during the fruit drying period. Raisin quality and quantity also declined in 1999/2000 to 38,142 tons as a result of heavy rains.

Exports during 2000/2001 are forecast to at 27,000 tons, unchanged from last year.

## **Northern Hemisphere**

### **Greece**

The 2000/01 raisin crop (September 2000 - August 2001) is estimated at 30,000 tons, up 33 percent from the previous year, due to greater planted acreage and excellent weather during the fruit drying period. Approximately 70 percent of the crop was graded No. 2 and 30 percent No. 4. Raisin production during 1999/2000 is estimated to reach 22,500 tons. Hot and dry conditions during the growing period combined with wet weather during the fruit drying period negatively affected the quality and output of the 1999/2000 raisin crop.

Raisin exports are expected to rise from 22,000 tons in 1999/2000 to 30,000 tons in 2000/01. As of late September and early October 2000, orders were completed for a large portion of the 2000 raisin crop at prices between U.S. \$950 - \$1,000 per ton (F.O.B.).

### **Turkey**

Raisin production in 2000/01 (September 2000 - August 2001) is forecast at 255,000 tons, up 34 percent from the previous year. Production area is projected to increase slightly in 2000/01 with some cotton growers in the region having already switched to raisin production in order to earn

higher returns. Favorable weather during the growing and drying period have also produced high quality raisins. Preliminary indications for this year's crop are #10 - 40 percent, #9 - 50 percent, and #8 - 10 percent compared to last year's 15 percent, 70 percent, and 15 percent, respectively. Raisin production in 1999/2000 is estimated at 190,000 tons, a 24-percent decline from the previous year.

Exports during 2000/01 are currently projected to increase by 11 percent to the record high level of 210,000 tons, as a result of the expected size and quality of the raisin crop. Current export prices for Turkey's raisins are on average U.S. \$200 lower per ton for standard #9 bulk and U.S. \$200 to \$400 lower per ton for standard #10 than last year. In 1999/2000, exports are estimated to be up slightly from 188,247 tons to 189,468 tons, despite the small crop. The import duty for raisins in 2000 is 57.3 percent of the CIF value on raisin imports.

### **United States**

Raisin production for 2000/01 (August 2000 - July 2001) is projected to reach 369,354 tons, up 19 percent from the previous year. Raisin production for 1999/2000 is estimated at 309,350 tons, up 23 percent from the previous year. According to the U.S. raisin industry, bunch count is the highest since 1985. At 9.61 tons per acres, yields are also the highest in three years.

Raisin exports are estimated to recover in 2000/01 to reach 115,000 tons from the low 80,251 tons exported in 1999/2000. Strong competition and high U.S. raisin prices led to a 28-percent decline in exports in 1999/2000. Imports are also expected to continue to decline as raisin stock levels reach more normal levels. For 2000/01, imports are expected to reach 14,000 tons, down 19 percent from the previous year and down 43 percent from 1998/99.

*(The FAS Attache Report search engine contains reports on the Dried Fruit industries for 6 countries, including Australia, Chile and South Africa. For information on production and trade, contact Karina Ramos at 202-720-0897. For information on marketing contact Kelley Strzelecki at 202-690-1341. 1/ Northern Hemisphere marketing years begin August 1, and September 1 in Turkey. Marketing years for Southern

Hemisphere raisins, (which are harvested early in the second of the split years shown) begin Jan. 1, and March 1 in Australia.

2/ Domestic consumption figures include raisins used for feed and distillation purposes. 3/ Imports include currants. U.S.

production data have been converted to a packed weight basis in order to align them with the other supply and distribution statistics.

## Walnut Situation and Outlook

Walnut production in selected countries in 2000/01 is forecast at 673,260 tons, 2 percent below the previous year's output, due primarily to a smaller U.S. crop offset by a larger Chinese crop. Exports from China, the world's largest producer, are forecast to remain stable, due to strong domestic demand. World walnut supplies are forecast to also decrease marginally, helping to stabilize declining U.S. grower prices, which have fallen 49 percent since 1996/97. Continued low prices are expected to spur world consumption and U.S. exports, which are forecast to remain steady, despite the smaller U.S. crop. The United States is the world's second largest walnut producer and the largest exporter.

### United States

The 2000/01 U.S. walnut crop is forecast at 222,600 tons, 13 percent below last year's crop, due to the alternate-bearing nature of the crop. U.S. exports in 1999/2000 are forecast at 97,000 tons, only slightly down from the previous year, due to lower production offset by strong export demand. U.S. grower prices have fallen 20 percent from 1999/2000 and are expected to contribute to relatively high levels of exports in 2000/01, despite the smaller U.S. crop. 1999/2000 shipments to the major European markets were down from 1998/99, but were up for Canada, Israel, Japan, and some Latin American markets.

The 1999/2000 walnut crop was the largest on record and contained probably the best quality of any walnut crop harvested in California. This large quality crop, combined with support from the Market Access Program (MAP), as well as publicity following the publication of the several health studies showing the health benefits of walnuts, all combined to make a good export year for walnuts. Exports to MAP-targeted countries in Canada, Germany, Italy, Israel, Japan, Korea and Spain are all slated to grow from 5 to 20 percent over the next 4 years. Germany is still the top market, reflecting the fact that it is both a good consumer of walnuts and the traditional trade center for nuts.

## **China**

Walnut production in 2000/00 is forecast to increase 9 percent to 300,000 tons, as new, higher-yielding varieties of trees planted during the last decade come into production. Output is likely to increase about 10 percent annually in the short- to medium- term, due to improved varieties and advanced growing techniques. While there is no official data on walnut consumption, growing production and stable exports indicate that walnut consumption is growing. This increase is attributable mainly to rising incomes of many Chinese, who not only are demanding greater diversification in snack food preferences and baked goods, but also are becoming increasingly aware of the health effects of nuts.

Strong walnut demand is responsible for the rapid growth in walnut imports, which increased 400 percent from 1998/99 to 1999/2000. In shell imports comprised 90 percent of total walnut imports in 1999/2000. Stronger growth in in shell walnut imports is related to the rapid expansion of China's processed walnut industry, which has low labor and manufacturing costs. Exports are expected to decrease slightly, due to strong domestic demand. China primarily exports shelled walnuts because of its comparative advantage in processing, but problems with quality and poor processing technologies prevent it from strongly competing in higher-quality export markets. Major export markets include the United Kingdom, Japan, Canada, and Hong Kong.

## **Turkey**

The 2000/01 Turkish walnut crop is forecast to remain constant at 70,000 tons. The lack of a systematic crop survey and widely divergent estimates from government and non-official sources make it difficult to accurately estimate production. However, both sources agree that walnut production is expected to gradually rise in the next 3-5 years, as new trees with improved varieties reach bearing age and acreage is increased. Per capita consumption is relatively stable in Turkey, with 50 percent of production consumed on-farm and the remainder marketed. Most of the marketed walnuts are consumed whole, with only a limited amount being processed. Walnut trade is very limited: most imports are inexpensive, lower quality nuts from neighboring countries; higher quality domestic nuts are usually exported.

## **India**

India's 2000/01 walnut production is forecast to increase 11 percent, due to favorable weather conditions. Exports are forecast at 14,000 tons in 2000/01, up 17 percent from the previous year, because of record domestic supplies and improved export competitiveness, due to the depreciation of the Indian Rupee. Export sales to traditional European markets were lower than anticipated in 1999/2000, due to increased competition from eastern Europe and the United States and inconsistent nut quality. Major export destinations in 1999/2000 were France, Spain, Egypt, Germany, Greece, Netherlands, Denmark, and the United Kingdom. There are no restrictions on walnut exports and no export subsidies are provided by the government. Given the high tariffs and strong domestic production, there are few opportunities for imports.

## France

In 2000/01, France's walnut production is forecast at 27,000 tons, down 7 percent from last year, due to unfavorable weather conditions. Due to a large crop and good quality nuts in 1999/2000, French in shell walnut exports increased to virtually all destinations except Germany, where France faced strong competition from the United States. Exports of shelled walnuts remained stable. French kernels are generally not price competitive on the export market, but may regain some market share in Germany in 2000/01 due to the appreciation of the U.S. dollar. Imports are forecast to increase 7 percent in 2000/01, due to the smaller crop. The United States remained France's leading supplier of in shell walnuts in 1999/2000, due to its competitively-priced and higher-quality walnuts. However, French imports of U.S. walnuts in 2000/01 are not expected to increase significantly unless French walnut exports increase to make room for imports on the domestic market. Imports of shelled walnuts have remained stable. Moldova has replaced China as France's largest supplier of shelled walnuts, due to labor and transportation cost advantages and better quality nuts.

## Italy

The 2000/01 crop is forecast at 12,000 tons, down 33 percent from the previous year, due to the cyclical nature of the crop. Future production is likely to decrease in the medium-term, due to declining acreage and lower productivity of older trees. Italy's walnut imports for 2000/01 are expected to increase, due to decreased domestic supplies. Excluding minor quantities from France and eastern Europe, most of Italy's imports are U.S. in shell walnuts, which have accounted for over 80 percent of total in shell shipments in the past 2 years.

## Chile

Chile's 2000/01 walnut crop is forecast to increase 10 percent to 11,000 tons, due to the crop's alternate-bearing cycle. Output in the short- to medium- term, however, is expected to increase, due to increasing acreage and replacement of aging orchards with improved, higher-yielding varieties. Exports are forecast to increase 7 percent in 2000/01, as a result of the higher output. Export volume is also expected to rise in the coming years, reflecting the forecasted expansion in production and better quality, once improved orchards come into bearing. Major export destinations remain Argentina and Brazil. Only small volumes of the highest-quality nuts, which can meet the often demanding size and grade specifications of customers such as Germany, are exported to Europe.

*The FAS Attaché Report search engine contains detailed reports on Tree Nut Competition or Market Intelligence for 16 countries, including Chile, China, France, India, Italy, and Turkey. (For information on production and trade, contact Lisa Anderson at 202-720-5028. For information on marketing contact Ingrid Mohn at 202-720-5330. Also, visit the tree nuts web page at: <http://www.fas.usda.gov/http/horticulture/nuts.html>)*

1/ Marketing years, August - July. Note: All data from the Bureau of Census. Shelling ratios for walnuts were .423, .410, .411, .414, and .423 for 1995/96, 1996/97, 1997/98, 1998/99, and 1999/2000 respectively. Computations originate from data published by USDA/National Agricultural Statistics Service (NASS) in "Non Citrus Fruits and Nuts: 1999 Summary" and "Noncitrus Fruits and Nuts: Final Estimates: 1992-1997"

## Processed Sweet Corn in Selected Countries

**U.S. sweet corn production for processing in calendar year (CY) 2000 is estimated at 2.98 million metric tons, down slightly from 1999, due mainly to a decline in contracted acreage and low wholesale prices. U.S. canned sweet corn (CSC) exports during the first 8 months of 2000 totaled 119,350 tons, nearly unchanged from the same period in 1999. Despite continuing economic troubles in Asia, U.S. exports of CSC to these markets continued to maintain a strong market share by rebounding to 76,665 tons, up 5 percent from the same period in 1999. U.S. exports of CSC for CY 2000 are forecast at 185,000 tons, up slightly from 1999.**

### United States

Production of sweet corn for processing in the United States in calendar year 2000 is estimated at 2.98 million metric tons, down slightly from 1999. Contracted output of the sweet corn this year was largely unchanged from 1999 as record-tying yields were offset by acreage reduction in response to low wholesale prices, particularly for canned corn. Production in Washington state, which accounted for slightly over a fourth of the sweet corn crop, was estimated to have increased 8 percent from the previous year's output. Production in Minnesota, which accounted for about a fourth of the U.S. sweet corn crop for processing, was estimated down 3 percent, due to excessive rain. Unfavorable weather in Wisconsin, Oregon and New York also reduced output for the 2000 sweet corn crop. According to the Economic Research Service (ERS), U.S. production of CSC in 2000 is estimated at 1.63 million tons (661,807 tons, net product weight), up 3 percent from 1999. Production of sweet corn for freezing for the same period is estimated at 1.34 million tons (380,319 tons, net product weight), down 5 percent from 1999.

Despite continuing economic troubles in Asia, U.S. exports of CSC to these markets continue to maintain a strong presence. During the first 8 months of CY 2000, U.S. CSC exports to the Asian countries totaled 76,665 tons, up 5 percent from the same period in 1999. During this period, shipments to Japan, Taiwan and Korea accounted for 60 percent of the total U.S. CSC exports. U.S. exports of CSC to South Korea more than offset lower shipments to other Asian markets during this period by registering an increase of 99 percent from the level in 1999. U.S. exports of frozen sweet corn during the same period totaled 44,000 tons, down 10 percent from 1999. Japan accounted for 59 percent of the total, followed by Canada with 7 percent and the EU countries, with 5 percent. U.S. exports of CSC for CY 2000 are forecast at 185,000 tons, up slightly from 1999.

### Thailand

Production of CSC in Thailand in 2000 is estimated at 26,000 tons, down 19 percent from the

previous year. This decline in output was attributed mainly to a reduction in area, caused by high carryover of stocks from last year and low farmgate prices received by farmers. According to the U.S. Agricultural Counselor in Bangkok, several CSC processors in Thailand have been financially weakened, due to losses from slow export business and low international prices and have already suspended their CSC production lines. Generally, about half of Thailand's fresh corn production is delivered to sweet corn canneries, with the balance being used for fresh and frozen consumption.

Despite a sharp reduction in production, Thailand's exports of CSC in calendar year 2000 are estimated at 28,000 tons, up 5 percent from the previous year, due mainly to packers reducing high levels of inventories. In 1999, Thai CSC exports totaled 26,000 tons, down 13 percent from 1998. Shipments to Hong Kong, South Korea, Germany and Japan accounted for 65 percent of total exports. According to trade sources, export sales to Hong Kong may drop sharply in the future following a rise in Chinese import duties, which are curtailing the re-export trade from Hong Kong into the interior of China. Thai packers reported that the average f.o.b. prices for CSC dropped from US\$ 6.30 to 6.50 per case (24/12 ounce cans) in late 1999 to US\$ 5.00 to 6.00 per case in 2000, due to prevailing fierce competition among Thai packers and weak international demand.

Production of canned baby corn in Thailand in 2000 is estimated at 54,000 tons, up 8 percent from the revised level in 1999, due mainly to an increase in export demand. Output in 2001 is forecast at 55,000 tons, up 2 percent from this year's level in anticipation of a further increase in export demand and a continued weak Thai baht. Exports account for nearly all of Thailand's canned baby corn production. According to trade sources, the average f.o.b. export prices for Thai canned baby corn dropped from US\$ 10.00 to 15.00 per case in 1999 to US\$ 8.00 to 13.00 per case in 2000. In 1999, the United States continued to be Thailand's best customer for Thailand's canned baby corn, followed by Japan, Germany, the Netherlands, Canada, Australia, Hong Kong and South Korea. Thailand remains the world's largest supplier of canned baby corn.

## **France**

In France, sweet corn production for processing includes canned and frozen product. In 2000, production of CSC is estimated at 235,000 tons (gross weight), nearly unchanged from the revised total in 1999, while production of frozen sweet corn is estimated at 30,000 tons. The bulk of France's sweet corn output is slated for the export market. In 1999, the EU countries accounted for approximately 85 percent of the CSC output and 68 percent of frozen output. The decline in French domestic demand for CSC recorded in 1998, which stabilized in 1999, was mainly due to French consumers' fears that sweet corn products contained genetically-altered corn. As a result, French sweet corn growers launched an educational campaign informing the public of the absence of genetically engineered corn in their production, as well as imports into France or Europe, in hopes of raising consumption levels.

France is a net exporter of sweet corn, but imports products from the United States, Hungary and Thailand. In marketing year 1999/2000, these suppliers accounted for 32, 26 and 19 percent of the

French market, respectively. During this same period, French exports totaled 96,000 tons with Germany, the United Kingdom, Spain, Italy and Belgium accounting for 82 percent of the total.

Reportedly, French domestic demand for U.S. sweet corn is likely to grow when it is certified non-GMO. Also, organic sweet corn is not grown in France, to date, and there is a niche market for this product in France.

## **Germany**

In Germany, only small amounts of sweet corn are produced annually. Imports account for the bulk of Germany's domestic sweet corn consumption. In CY 1999, Germany imported 66,000 tons of CSC and 12,000 tons of frozen sweet corn. France continued to be the biggest supplier of CSC, followed by Hungary, Thailand, Italy and the United States. The major supplier of frozen sweet corn was Hungary, accounting for more than 50 percent of Germany's imports.

The extreme weakness of the Euro against the U.S. dollar is hurting U.S. sweet corn exports to Germany. Trade contacts report that German importers bought very little U.S. sweet corn from the 2000 U.S. crop. Importers complained that U.S. sweet corn was simply too expensive due to the unfavorable exchange rate. While the quality of U.S. sweet corn is still regarded as superior, buyers no longer respond to the U.S. quality advantage. Germany is primarily a price-aggressive market. Prices are currently the main marketing tool in the food retail sector.

*(The FAS Attache Report engine contains reports on processed sweet corn for 4 countries, including the United States, Thailand, France and Germany. For information on production and trade, contact Emanuel McNeil at 202-720-2083. For information on marketing contact Elizabeth Mello at 202-720-9903. For additional information on sweet corn trade numbers, please visit our commodity trade page at <http://www.fas.usda.gov/http/exportdat.html> )*

## **World Trade Situation and Policy Updates**

### **U.S. Fresh Sweet Cherry Exports Reach Record Value in FY 2000**

U.S. shipments of fresh sweet cherries in FY 2000 totaled 35,965 tons, unchanged from the volume shipped in FY 1999. However, higher prices boosted the export value to a record \$158 million, up 6 percent from the value exported in FY 1999. The increase mainly reflects more sales to Japan, the largest market for U.S. sweet cherries. Shipments to Japan in FY 2000 were up 12 percent to a record \$101 million. Increased promotion efforts, which emphasized the health benefits associated with eating cherries encouraged more Japanese demand for U.S. sweet cherries. Moreover, some new U.S. sweet cherry varieties, such as Seldom, were sold in Japan for the first time in order to fill the larger demand. U.S. sweet cherry exports also increased to other important markets, including Taiwan (up 13 percent to \$17 million) and Australia (up 20 percent to \$2 million). Washington state, Oregon, Idaho and Utah, benefitted the most from U.S. cherry shipments in FY 2000. Reportedly, sweet cherry exports from these four states added about \$88 million to the regional economy and created 4,900 new jobs.

### **China Lifts Ban On Fresh Grapes From Riverside County, California**

On October 31, 2000, FAS was informed that China had agreed to allow imports of table grapes from Riverside County, California. The decision was made following the effective Medfly eradication program that was undertaken by APHIS in Riverside County in 1999. With this development, China's market is now open to all commercial grape producing regions in California. A phytosanitary agreement was finalized in May 1997, which granted California table grapes official access to China. However, only grapes produced in Kern, Tulare, Fresno and Madera counties were initially allowed access. King's County was added to the approved list in the Fall of 1997. Since the market opening, China has become an important outlet, with direct shipments valued at \$9 million in 1998. Although direct exports to mainland China were valued at only \$1.3 million in 1999, increased sales to Hong Kong offset this decline. Exports to Hong Kong, the second largest market for California grapes, were valued at \$50 million in 1999.

### **FDA Inspects Guatemalan Raspberry Farms**

Officials from the Food and Drug Administration (FDA) were scheduled to visit Guatemala's raspberry farms between November 11- 20, 2000. During this visit, they were to conduct an inspection of the public health situation regarding raspberries and their shipments to the United States. These inspections will determine if the firms' facilities and operations are in accordance with current good manufacturing practices regulations. Guatemala's raspberry exports fell sharply after a cyclospora outbreak during 1997 was linked to raspberries from Guatemala. During calendar year (CY) 1996, one year before the cyclospora incident, the United States imported \$914,000 in

raspberries from Guatemala. To date (January - August 2000), U.S. total raspberry imports from Guatemala are valued at just \$33,000.

### **Fresh Blueberry Exports Reach Record Value of \$20 Million in 2000**

U.S. fresh blueberry exports were valued at a record \$20.1 million for the first 8 months of 2000. The value of U.S. fresh blueberry exports ranged between \$8 and \$9 million between calendar year (CY) 1995 and CY 1998. U.S. fresh blueberry exports almost doubled from \$8 million in 1997 to \$15 million in 1998. Strong demand in Japan and Canada fueled this increase in exports. In 2000, exports to Canada, the Netherlands, and Iceland have shown the greatest increase. If current trends hold, Iceland may become the fourth largest market for U.S. fresh blueberry exports (compared to 14<sup>th</sup> in 1999). As a result of this growth in exports, the North American Blueberry Council (NABC) added Iceland as a new target market. According to NABC, promotional efforts in Iceland will include consumer and trade publicity efforts and the possible development of an Icelandic language website.

### **Japanese Cranberry Market Expands Rapidly**

In the 1999 season (August 1999 - July 2000), Japanese imports of cranberries from the United States jumped seven fold to approximately 80,000 barrels (3,628 metric tons), valued at approximately \$5 million (FOB) from the previous season. Japanese industry estimates that imports from the United States will increase to 120,000 - 150,000 barrels in the 2000 season. The strong health benefits associated with cranberries has ignited the sales of cranberry juice, yogurt, pastry and candy products. Cranberries are imported dried, frozen and as concentrated juice and are exclusively sold to Japan's food processors and retailers.

### **Quebec is an Untapped Market for U.S. Wine**

In 1999, wine sales in Quebec reached \$8.3 million cases, the highest in Canada, yet the Quebec market represents the lowest market share for U.S. wines in Canada. Table wines sold in Quebec are primarily sourced from France (34 percent), Canada (32 percent) and Italy (14 percent). Only 2 percent of Quebec's wine sales are from the United States. With per capita wine consumption in Quebec at 14 liters, the highest in Canada, there is great market potential for U.S. wines. FAS/Ottawa is sponsoring the first ever marketing event in the Quebec market and the first SIAL show in North America on March 4-6, 2001. The U.S. wine industry is encouraged to participate in this show to take advantage of a promising market opportunity.

### **Citrus Growers in Greece Shift from Oranges to Tangerines**

Orange production in Greece is forecast to be close to 900,000 MT for 2000/01, which is higher than average, but still lower than last year's record crop. Tangerine production will increase again to 90,000 MT and lemon production is presently forecast at about 140,000 MT. Orange juice

concentrate forecasts for 2000/01 stand at about 15,000 MT. Greek citrus growers were negatively affected by the 1996 EU citrus sector reform because increased competition from other countries and reduced withdrawal levels have forced them to send increasing tonnages of fruit to the processing industry at reduced prices. As a result of low profit margins, farmers are putting less effort into maintaining orange groves and refocusing on expanding tangerine production, which is more profitable.

### **Canada's Strawberry Imports from the U.S. Projected to Exceed \$75 Million**

Early indicators point to a 20 percent year-to-year decline in total Canadian fresh strawberry production during 2000, reflecting poor weather conditions throughout the spring and early summer that reduced the production potential in the main strawberry producing regions of Quebec and Ontario. Total Canadian strawberry production in 2000 fell to about 21,000 metric tons from 26,349 metric tons in 1999, but increased imports of fresh strawberries from the United States helped offset the decline in Canadian production. Imports of fresh strawberries from the United States in the current marketing year on pace to reach a record level of about 52,000 metric tons, valued at more than \$75 million.

## Organic Updates

### Organic French Fries in the Netherlands

Compared to total Dutch french fry production of 1.2 million metric tons per year, organic french fry production is small--only about 3,000 MT, but increasing rapidly. The largest producer, *Oerlemans Foods*, produces 2,000 MT of organic french fries, but this comprises only 5 percent of the company's total french fry production. Approximately 60 percent of *Oerlemans'* organic french fry production is bound for U.K. supermarkets and 25 percent goes to supermarkets in Germany. Organic french fries are still a rare phenomenon in the Netherlands; only two supermarkets, *Konmar* and *Albert Heijn*, sell them. However, recently, three Dutch french fry producers--*Aviko*, *Lamb Weston/Meijer* and *Farm Frites*--were certified by SKAL, a Dutch certifying agency, to produce organic french fries. At this time, these three companies together produce less than 1,000 MT of organic french fries, but are expected to increase production.

It is believed that the most important factor for future development of the organic french fry market in the Netherlands will be lowering the price differential between conventional and organic potatoes. Organic french fries currently cost about 2.5 times as much as other french fries, while the price for organic potatoes is three times higher than conventionally-grown potatoes. Imports of organic potatoes are almost the same as total Dutch production of organic potatoes on a volume basis.

### Australian Organics Market Continues to Expand

The Australian organic market is reportedly growing at 25 percent per year. Although Australia's organic sector is currently geared to the export market, domestic demand is edging up in response to consumer concerns about GMOs and other food issues. Domestic retail sales and exports are estimated to reach about US\$143 million this year. The expansion is fueling demand for domestic standards; currently only organic exports are certified by entities that are accredited by the Australian Quarantine and Inspection Service. Organic food is rapidly moving into mainstream supermarkets due to consumer demand and responsive retailers.

### German Subsidies for Organics

By the end of 1998, there were 9,213 organic farms in Germany which together cultivated 416,000 hectares (1.28 million acres) or 2 ½ percent of total German agricultural land. Organic and conventional farmers operating similar sized farms are financially comparable, but a larger share of organic farmers' income is due to higher subsidy levels. Organic farmers receive subsidies that are about US\$104 per hectare (US\$42 per acre) higher than those offered to conventional farmers. Without this higher level of support, most organic farmers would not survive since average per-farm income would be about US\$6,150 lower.

For more news on organics, see HTP's monthly newsletter "Organic Perspectives," available at the HTP home page: [www.fas.usda.gov/http/organics/organics.html](http://www.fas.usda.gov/http/organics/organics.html) The newsletter contains reports on organics from around the world gleaned from attache reports, trips made by HTP's organics staff, and other sources. The newsletter also covers items of interest about the U.S. national organic program and the domestic organic industry. A list of upcoming conferences, trade shows and other events is included in every issue.

## **Export News and Opportunities**

Horticultural exporters, do not overlook the billions of dollars available to help facilitate sales to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without credit guarantees. Invest the time to learn more about the Export Credit Guarantee Program (GSM-102) and Supplier Credit Guarantee Program (SCGP) to increase your sales and lower your risks. GSM-102 and SCGP ensure that American farm and food products continue to move to markets around the world. USDA does not provide financing, but it guarantees payments due to U.S. exporters in case the foreign banks or importers default.

Since the last publication, the U.S. Department of Agriculture (USDA) has authorized credit guarantees for sales of U.S. agricultural commodities to Lebanon, South America Region, Peru, West Africa Region, Caribbean Region, Southern Africa Region, Baltic Region, Poland, Kazakhstan, Morocco, Southeast Europe Region, Central Europe Region, and China and Special Administrative Region of Hong Kong under GSM-102. Also credit guarantees have been authorized for sales of U.S. agricultural products under the SCGP to Russia, Bulgaria, Caribbean Region, West Africa Region, Baltic Region, Japan, Poland, Kazakhstan, Yemen, Israel, Taiwan, South America Region, Southeast Europe Region, and Central Europe Region. You may access specific GSM-102 and SCGP information regarding allocations, definition of regions, terms of coverage, eligible banks, guarantee fee rates, and other special terms and conditions on the Internet at:

**[http://www.fas.usda.gov/scriptsw/PressRelease/pressrel\\_frm.idc](http://www.fas.usda.gov/scriptsw/PressRelease/pressrel_frm.idc)**

The following tables present the FY 2001 GSM-102 and SCCP for which USDA has authorized credit guarantees for sales of U.S. horticultural products. For most countries and regions, exporters may apply for credit guarantees on a first-come-first-served basis to cover sales of any of the eligible commodities published in FAS program announcement PR 0240-00, issued June 12, 2000 or as superseded. The following horticultural products are eligible under the export credit guarantee programs: dried fruit; fresh fruit; frozen fruit; canned fruit; 100-percent fruit juices; fruit and vegetable concentrates, pastes, pulps and purees; honey; hops or hops extract; beer; tree nuts; fresh vegetables; canned vegetables; dried vegetables; wine; and brandy. The General Sales Manager will consider requests to establish an SCGP and/or GSM Program for a country or region or amend an authorized program to include horticultural commodities and products which are currently not eligible.

### **GSM-102**

The GSM-102 program makes available credit guarantees for sales of U.S. agricultural commodities overseas. USDA does not provide financing, but guarantees payments due from foreign banks. USDA typically guarantees 98 percent of the principal and a portion of the interest. The GSM-102 program covers credit terms from 90 days to 3 years.

Under the program, once a firm sale exists, the qualified U.S. exporter applies for a payment guarantee before the date of export. The U.S. exporter pays a fee calculated on the dollar amount guaranteed, based on a schedule of rates applicable to different lengths of credit periods. The Commodity Credit Corporation (CCC)-approved foreign bank issues a dollar-denominated, irrevocable letter of credit in favor of the U.S. exporter, ordinarily advised or confirmed by the financial institution in the United States agreeing to extend credit to the foreign bank. The U.S. exporter may negotiate an arrangement to be paid as exports occur by assigning the U.S. financial institution the right to proceeds that may become payable under the guarantee, and later presenting required documents to that financial institution. Such documents normally include a copy of the export report. If a foreign bank fails to make any payment as agreed, the exporter or the assignee may file a claim with USDA for the amounts due and covered by the guarantee. USDA will pay the U.S. bank and will take on the responsibility of collecting the overdue amount from the foreign bank.

The GSM-102 table presents the FY 2001 GSM-102 for which USDA has allocated credit guarantees for sales of U.S. horticultural products as of October 27, 2000. Additional information about the GSM-102 program, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

**<http://www.fas.usda.gov/excredits/exp-cred-guar.html>**

### **Supplier Credit Guarantee Program**

The SCGP is unique because it covers short-term financing extended directly by U.S. exporters to foreign buyers and requires that the importers sign a promissory note in case of default on the CCC-backed payment guarantee. The SCGP emphasizes high-value and value-added products, but may include commodities or products that also have been programmed under the GSM-102 program.

The Supplier Credit Guarantee table presents the FY 2001 Supplier Credit Guarantee Program for which USDA has allocated credit guarantees for sales of U.S. horticultural products as of October 27, 2000. Additional information about the SCGP, regulations, country specific press releases and program announcements, and a Monthly Summary of Export Credit Guarantee Program Activity may be accessed on the Internet at:

**<http://www.fas.usda.gov/excredits/scgp.html>**

The SCGP encourages exports to buyers in countries where credit is necessary to maintain or increase U.S. sales but where financing may not be available without CCC guarantees. Under the SCGP, CCC guarantees a portion of payments due from importers under short-term financing (up to 180 days) that exporters have extended directly to the importers for the purchase of U.S. agricultural commodities and products. These direct credits must be secured by promissory notes

signed by the importers. CCC does not provide financing but guarantees payment due from the importer.

Program announcements, available on the Internet, provide information on specific country and commodity allocations, length of credit periods, the required form of promissory note, and other program information and requirements.

*(For further information on the SCGP or GSM-102 Program for horticultural commodities, contact Yvette Wedderburn Bomersheim on 202-720-0911).*

CARDHOLDER'S NAME

☐ NTIS Deposit Account Number:

☐ Check/Money Order enclosed for \$ (PAYABLE TO NTIS IN U.S. DOLLARS)

## ALL SALES ARE FINAL

NTIS electronically stores our collection of almost 3 million items and custom-reproduces a single copy specifically for your order. Therefore, NTIS does not accept cancellations, requests for modifications, or returns for credit or refund. All sales are final. If you believe the item you received is defective or if we made an error in filling your order, please contact our Customer Service Department via e-mail at [info@ntis.fedworld.gov](mailto:info@ntis.fedworld.gov) or by phone at 1-888-584-8332 or (703)605-6050.

## SINGLE COPIES

To order, call NTIS Sales Desk 1-800-553-NTIS (6847) or (703) 605-6000, fax to (703) 605-6900; or E-mail to: [orders@ntis.fedworld.gov](mailto:orders@ntis.fedworld.gov)

For single copies, add \$5 handling fee per total order for U.S., Canada, Mexico; \$10 per total order for all other countries. RUSH service is available for an additional fee; please call the NTIS Sales Desk for details.

For questions or concerns on the data included in this publication,  
contact us at the address shown above.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of

World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail [kaup@fas.usda.gov](mailto:kaup@fas.usda.gov)
